

HealthFirst® makes it easy for your dental practice to **achieve and maintain compliance**. HealthFirst can help you build a compliance plan and provide you with the products and solutions necessary to meet today's standard-of-care requirements. Call us today at **800 331 1984**, or visit **HealthFirst.com** to schedule your on-site training.

Equipment

HealthFirst Emergency Medical Kit

Choose the kit that is right for your practice:

- **General Practice** - The contents of the SM-Series Basic Emergency Medical Kit meet today's standard-of-care, are compliant with many state regulations and consistent with recommendations from the ADA, JADA and the HealthFirst Independent Medical Advisory Board. Kits are configured with adult medications or with adult and pediatric medications.
- **Conscious Sedation Practice** - The contents of the SM-Series Basic Emergency Kit combined with two additional medications, Flumazenil and Naloxone, meet today's standard-of-care and are compliant with many state regulations.
- **Sedation Practice** - The Mobile ACLS® Emergency Medical Kit allows rapid response to those who need life-saving care, regardless of location. When combined with a portable oxygen system, the responder can quickly access a complete set of medications and devices to sustain Basic Life Support, Advanced Cardiac Life Support (ACLS) or Pediatric Advanced Life Support (PALS) for up to 30 minutes.

Oxygen

It is important to have easy access to a portable oxygen system that can reach a patient regardless of location. HealthFirst offers a Basic Emergency Oxygen System that may be supplemented with resuscitation devices to provide positive-pressure for up to 30 minutes.

AED

Many states require all dental practices have an automated external defibrillator on-site and easily accessible. HealthFirst offers multiple types of AEDs to meet your organization's specific needs and compliance requirements.

First Aid Kit

OSHA Regulations (Standard - 29) indicate that first aid supplies are required to be adequate and readily accessible in the workplace.

Training

Basic Life Support (BLS) –Onsite Team Training

Basic Life Support is the level of medical care used for patients with life-threatening illnesses or injuries (without the need for medical equipment) until the patient can receive full medical care at a hospital. This course covers the ABC's of Basic Life Support, including CPR, AED, Bag-Valve-Mask resuscitator operation and rescue breathing.

Emergency Medical Kit Review

This course walks you and your staff through your HealthFirst SM Emergency Medical Kit so you are familiar with the tools and medications provided, as well as the proper usage. We'll show you how to correctly open and withdraw fluid from an ampule, use the Epinephrine Auto-Injector, and the administration of emergency oxygen.

Response Plan

Onsite Emergency Response Plan

Emergency response and safety plans, including fire drill and evacuation plans, are required by OSHA. And just like a fire drill, every office should have an emergency response plan so you and your staff know exactly what everyone's role is and can execute that role flawlessly. HealthFirst can help you develop a plan that fits your organization's unique setup and staff size.
